Projects

Joberra

- **Description:** Joberra is a leading online platform connecting job seekers with employers across various industries. The project aimed to enhance the user experience and functionality of the Joberra platform to better serve the needs of both job seekers and recruiters.
- **Technologies Used:** Angular, SQL, C#.
- **Key Responsibilities:**
 - Implemented a dynamic time zone feature to ensure seamless user experiences for employees and employers, synchronizing all interactions and tasks with their respective time zones.
 - Fixed various bugs throughout the project to enhance overall system stability and ensure smooth functionality.

Task Management (YTM)

- **Description:** YTM is a comprehensive task management application designed to streamline workflow organization and increase productivity for individuals and teams. The project aimed to develop a user-friendly and efficient platform for creating, assigning, tracking, and prioritizing tasks across various projects and deadlines.
- **Technologies Used:** VUE JS, Node JS, Mongo DB.
- **Key Responsibilities:**
 - Implemented a user hierarchy system to organize user roles and permissions effectively within the project.
 - Developed User Attendance functionality to track employee attendance records efficiently.
 - Designed leave management features, allowing users to apply for leaves and managers to approve or reject leave requests.
 - Resolved multiple bugs across the project to ensure optimal performance and user satisfaction.

Client Enrollment

- **Description:** The Client Enrollment System project aimed to create a robust and user-friendly platform for efficiently enrolling clients into various programs or services offered by the organization. The system was designed to streamline the client onboarding process, enhance data accuracy, and improve communication between clients and staff members.
- **Technologies Used:** NEXT JS, Node JS, Mongo DB.
- **Key Responsibilities:**
 - Implemented functionality for clients to request price negotiations for provided tests, enhancing flexibility and accommodating individual client needs.
 - Developed a user hierarchy system to organize user roles and permissions effectively within the project, ensuring secure access and proper authorization
 - Addressed and resolved various bugs across the project to ensure smooth functionality and optimal user experience.

MR Yoda

- **Description:** The MR Yoda is a ecommerce website where user can book an appointment and make payments
- **Technologies Used:** NEXT JS, Node JS, postgresql.
- **Key Responsibilities:**
 - Implemented functionality for user to add test to cart and make an order of the tests and payments.
